

File Stuff

Friday, March 2, 2018 9:18 AM

Stop tracking a file (even if in gitignore)

```
git update-index --assume-unchanged file.csproj
```

Undo changes before a commit

```
git checkout HEAD Web/Scripts/mp_linkcode.js
```

Remove changes to tracked files

```
git reset --hard HEAD
```

Remove changes to new untracked files

```
git clean -df
```

- f == force the clean

- d == directories also included

(This does NOT clean up files included in .gitignore)
